CAREER OBJECTIVE

A software developer skilled in building scalable, clean, end-to-end web applications. Focused on creating efficient, user-centric solutions that drive organizational value.

EDUCATION

Bachelor of Computer Applications **2022 - 2025**

Nisarga College of Management (University of Mysore)

CGPA: 9.35

Master of Computer Applications **2025 - 2027**

B.M.S College of Engineering

CGPA: 8.73

PROJECTS

AgriTrade **Project Link**

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, WebSockets, Vercel

- Developed a full-stack agricultural marketplace and auction platform enabling farmers buy, sell agricultural products with real-time updates and seamless bidding experience.
- Implemented secure **JWT-based role control** (Farmer, Seller, Admin) robust auction scheduling, bid validation and image handling with ImgBB.
- Engineered complete auction functionality using **WebSockets** — including scheduling, **real-time live bidding**, auto-validation of bid increments, synchronized countdown timers and user-specific notifications for upcoming auctions.
- Integrated **Razorpay** for secure order creation and payments and optimized product workflows with ratings, reviews and category-based recommendations.
- Architected REST APIs with a clean controller–service structure and deployed a scalable frontend on **Vercel** and backend on **Render**

Load Balancer Simulator **Project Link**

Tech Stack: React.js, Node.js, Express.js, Socket.IO, Recharts

- Developed a Load Balancer Simulator implementing **Round Robin** and **Least Connections algorithms** to study request distribution, server load management and **scalable system architecture**.
- Built a real-time monitoring dashboard to analyze various metrices and strengthening practical understanding of **System Design** and **distributed systems concepts**.

TECHNICAL SKILLS

Programming Languages: C++, Python, JavaScript

Frameworks / Libraries: Node.js, React, Express.js, Tailwind CSS

Database: SQL, MongoDB

Software & Tools: Git, GitHub, Postman

CS Fundamentals: Data Structures and Algorithms, DBMS, System Design

INTERNSHIP

MERN Stack Developer Intern at AndroWebsTech Pvt. Ltd. **Sep 2025 – Dec 2025**

- Followed **JIRA**-based workflows for sprint planning and task management.
- Worked on backend features including pagination, REST APIs and query optimization.
- Contributed to building frontend components in React.js and improving UI responsiveness.
